The FSC Plantations Review
- a summary

Anders Lindhe
TFD April 17, 2008
Content

• Brief background
• Outline of the review process
• The recommendations of the Policy Working Group
• Next steps
• Some impressions and lessons learned
Background

- Growth of FSC - more plantations certified
- Increasing concerns that:
  - standards favour plantations over natural forests
  - standards unclear and open to interpretations
  - CBs not rigorous enough
- Criticism of globalisation and large monocultures
- 2002 FSC GA requested "concrete guidance on interpretation of Principle 10"
- FSC Plantations Review launched Sept 2004
Process (1)

• ‘Member-driven’ first phase to identify key concerns and policies for addressing them

• Policy Working Group based on chamber self-selection of 12 representatives

• FSC-balanced with 4 people from each chamber (2 North + 2 South)
Process (2)

- 5 PWG meetings over 18 months
- Consultations with chambers
- GA 2005 stakeholder meeting
- Open consultations on draft report
- Final report with very strong consensus
PWG report

- Recommendations related to various components of the FSC system
- Downloadable from: fsc.org/plantations
1. Adopt a Social Management Systems approach that:

- ensures ‘good neighbour’ relationships
- contributes to development and poverty reduction through local involvement
- upholds workers’ and indigenous peoples’ legal and customary rights
- includes participatory assessments of social impacts
2. Maintain ecosystem integrity (P6.3)

- Prevent-mitigate negative effects
- Focus on the MU level – in the landscape
- Continuum from plantations to natural forests
- The more impact - the more mitigation
  - assess both set-asides and managed stands
  - consider the conservation context
  - take account of local communities’ needs
  - identify the managers’ sphere of influence
3. Improve stakeholder consultation

- Consultation must be a continuous management activity!
- Managers must be proactive and reach out to affected stakeholders
- Provide guidance to managers about mechanisms for resolving conflicts
4. Adopt a continuous improvement approach to use of chemicals

- Acknowledge that chemicals will not be phased out in the short perspective
- Focus on proactive reduction of use and negative impacts
- Implement integrated chemicals management and best practises
5. Urgent need to improve:

- Consistency of CBs work
- Guidance and training for CBs
- Monitoring of CBs performance
- Complaints procedures
- Ensure that CBs rotate their auditors
6. Analyse FSC’s approach to conversion

Problems:
• Current rules cause much frustration
• FSC’s objectives are unclear
• Some criteria may be contradicting

Recommendations:
• Evaluate the effects of the current policy and of potential changes
• Clarify current policies for granting exceptions and for addressing conversion of other ecosystems
7. Input to the review of the FSC P&Cs:

- Develop one common integrated set of P&Cs that apply to all management units, both forests and plantations

- Keep FSC open to operations across the full continuum - from low-impact natural forest management to high-intensity, short-rotation plantations
Overview of the second phase

• Four teams of 4-6 technical experts approved by the BoD July 2007
• No personal links to the PWG

A: Raising the bar on social responsibility
B: Maintaining ecosystem integrity
C: Continuous Improvement approach to chemicals
D: Investigating the impacts of P10.9 (conversion)
Second phase draft outputs so far:

- Proposals for revision of the P&Cs
- Generic indicators to improve consistency
- Best practise IPM guide, on-line resource center for managers
- Framework for analysing changes to 10.9

(First draft of revised FSC P&Cs expected late spring 2008)
Some lessons learned

- There are no shortcuts to consensus
- Much depends on balanced representation, time and commitment!
- Clear ToRs necessary for all participants
- Chamber consultations may need support
- Outside professional facilitation essential
Conclusions

• Unique learning exercise for all involved
• Mind-expander and bridge-builder
• Expensive, difficult and often frustrating…
• …but also a prime example of the commitment and focus on participatory process that sets FSC apart!
Thank you!
