

An aerial photograph of a river winding through a lush, green forested landscape. Mist or smoke is rising from the river, creating a dramatic effect. The river forms a large loop in the center of the frame.

BENEFIT SHARING MECHANISMS: PRINCIPLES FOR DIALOGUE

CONFUSION IS EVERYWHERE

Source: Angelsen 2009

Benefit-sharing Basics

Balancing Objectives

Effective Incentives vs. Legitimacy

1. Provide effective incentives for actions
 - Overall benefits are determined by costs, demand & setup
2. Build broad support & legitimacy of REDD+ system
 - Fair distribution avoids resource conflict, builds trust
 - Particular attention paid for poor and vulnerable groups*

What is REDD+ benefit-sharing?

“Everyone has a say”

FAO says:

*“**agreements between stakeholders**, such as private sector, local communities, government and non-profit organizations, about the **equitable distribution of benefits** related to the commercialization of carbon”*

IUCN says:

“agreements between stakeholders about the distribution of monetary benefits from the commercialization of forest carbon”
