

TFD Scoping Dialogue

Moving the Issue Forward

June 3rd, 2011

Friday, 3 June

9:00 Plenary Discussion:

Next Steps and Future Direction

11:15 Summary by Co-Chairs

11:30 Adjourn

Breakout Questions (Afternoon)

Stakeholder Groups :

Business/ Environment/ Social

From your stakeholder group perspective and based on the discussions and list of issues:

- What's your vision of how to reconcile the competitions between food, fuel, fiber and forest?
- What are the big barriers to achieve your vision?

Social Group

Visions: Local groups, indigenous peoples, smallholder's rights mainstreamed into 4Fs planning and as part of the solution

Barriers:

- Vision of different sectors does not emphasis social issues
- Poor implementation of Free, Prior, Informed and Consent
- Lack of implementation of regulations
- Lack of benefits distribution mechanisms

Environment Group

Vision: Landuse planning with a trusted governance structure, fair distribution of benefits and link to local reality.

Barriers:

Poor governance that leads to lack of trust in the fairness of outcomes of a land-use planning

Business Group

Vision: Sustainable Forest Management of existing forests with development of protected area network and intensification of planted forest can help meet future wood and fiber needs; and help reduce the land conflict among the other Fs.

Barriers:

- Existing landuse planning generally does not favor forestry development
- NGOs and society generally does not favor intensively managed forest and technology required to increase productivity
- Full market value for fiber, biofuel and other ecosystem services are not realized
- Market distortions due to inequality of subsidies, taxes, certification and sustainable production standards among all sectors
- NGO's vision to use less wood not more wood

Issues for Potential Further Dialogue

- **Principles for a new generation of land-use planning: e.g.**
 - Protect local livelihood and IP's rights
 - Trust in the fairness of the outcomes
 - Reconciliation of global vision with local reality
- **Intensification:**
 - What are the potentials and risks related with increasing productivity through advancing technology?
- **What are the key factors to help bring equity among different sectors?**
 - “True Price” for commodities
 - Fungible market for different ecosystem services
- **How to bring about consumption pattern change to meet societal needs and reduce footprint?**
 - Bottom-up v.s. Top-down approach
 - Buy better? Buy Less?

**Cross-cutting key components from yesterday morning's list of issues:
FPIC, communication**

Plenary Questions

- Within these broad issues, what are the key fracture lines for which dialogue can be useful?
- What are the gaps?
- Is there a role for TFD dialoguing on those issues?
- What are the existing processes we can link TFD's 4F Initiative with? E.g. Agriculture Day during COP; World Water Day; FAO events?

Event Calendar

December: COP Agriculture Day

May, 2012?: World Water Day
